Office Action Summary

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 21 and 28-32 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 21 is indefinite because the exact ranges claimed are unclear, due to the recitation of preferred ranges. The claim will be interpreted as requiring the non-preferred range. Claims 28-32 are indefinite as it is unclear how the treatment volume size limits the structure of the device.

Claims 1-5, 7, 9-14, 16-21, 23, 24, 26-31, 37, 39, 40, and 43-49 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Tankovich et al.

Tankovich et al teach a method and device as claimed see Figures 16A, 16B, and 23; column 16 line 20 to column 42 line 30; and column 58 line 14 to column 67 line 28. The volume of the treated portions can be made any described percentage of the entire volume by appropriate definition of the entire volume.

Claims 1 and 6-13, 15-18, 27-34, 36-39, and 41-47 are rejected under 35 U.S.C. 102(b) as being anticipated by Eppstein et al.

See Figure 1 and column 16, line 42 to column 17, line 56; column 22, Example 5; and column 43, Example 28 herein U.S. Patent 4, 775,364 teaches the formation of lines.

Claims 49 and 50 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Nanaumi.

Claims 1, 22, 27, 36, and 38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hoskin et al in combination with Tankovich et al. Hoskin et al teach a method such as claimed except focusing the beam. Tankovich et al teach the use of controlling depth by controlling wavelength. It would have been obvious to the artisan of ordinary skill to employ a wavelength control rather than the needle depth control in the method and device of Hoskin et al, since this would reduce the chance of infection by leaving the skin intact, official notice of which is hereby taken, thus producing a method and device such as claimed.

Claims 1, 6-8, and 35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nanaumi in combination with Tankovich et al. Nanaumi teaches a method such as claimed (see figure 6 and column 1 lines 8-15), except for producing multiple foci. Tankovich et al teach concentrating the applied laser radiation and the coagulation of blood vessels with the concentrated radiation. It would have been obvious to the artisan of ordinary skill to employ the concentrating step of Tankovich in the method of Nanaumi, since this would allow coagulation by thermal diffusion, leaving the surface tissue less affected, thus producing a method such as claimed.

Applicant's arguments with respect to claims 1-50 have been considered but are moot in view of the new ground(s) of rejection.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO**

Art Unit: 3739

MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
